ABOUT ME //

Passionate about coding, always studying to learn something new and find ways to improve my skills. My goal is to broaden my possibilities as a professional and challenge myself to look for the smartest solutions. I love learning and am widely open to every opportunity to evolve both technically and personally.

EDUCATION //

2013 - 2016 • FATEC Rubens Lara
System Analysis and Development

EXPERIENCE //

Software Engineer @ QuintoAndar (dec/2019 - Now)

As a QuintoAndar Software Engineer, I get to be challenged every single day by maintaining a relationship with Product Owners and Designers as well as with other Engineers to come up with new ideas on building a better system for the end user.

Helped build large PWAs using React (a Javascript Framework), reviewed other programmers' code and participated in important meetings and dynamics concerning the product.

My team constantly promotes Tech Talks in order to share knowledge through our peers. The projects I worked with have improved significantly the internal Operations team experience, making the company's lead conversion increase and, consequently, broadening the company's revenue.

As we have freedom within the company to lead our own initiatives, my first one was helping improve our overall guidelines as much as possible. I am also very present in gender equality actions together with other female engineers.

FullStack Developer @ PRORADIS (apr/2019 - nov/2019)

At PRORADIS, I have helped build multi-platform mobile applications with Flutter and Dart. I also had the opportunity to learn C# along the way and have my first experience with back-end applications.

Since the company was on the Medicine field, the project I worked in focused on making patients' reports available online through our platform. Our system managed the process of a Doctor writing and uploading a patient's reports - alongside pictures and any related files - online and making it available for download.

Web Developer @ Vitrio (ago/2018 - apr/2019)

During my time in Vitrio, I had the chance to work with the e-commerce platform VTEX and help clients increase their sales with high performing pages. I also got to learn about Google Analytics and how to gather customer data in order to deliver a highly customized experience during further access.

Web Developer @ Épico Digital (set/2016 - jul/2018)

My experience working in Epico has taught me a lot about teamwork and coding best practices. I had the opportunity to work with highly skilled developers that guided me all the way. I used a lot of the CSS Framework Bootstrap and the preprocessor Sass, as well as PHP with Laravel. Had to learn how to look through the documentation of each technology to understand all their possibilities. Another very important thing I learned was how to use Javascript frameworks. It was the first time I ever heard of Angular and VueJS, that became everyday tools to me.

Assistant Web Developer @ D1UP (jun/2016 - set/2016)

I have participated in the company as an intern, but as soon as I finished college, I was hired. At D1UP we built websites to promote either our client's business or a punctual action. I got to learn a lot about CSS properties and best practices and Semantic HTML. Working with a multidisciplinary team has made me understand how to respect schedules and how to communicate with Product Owners and Designers to deliver the best product to the end-user.

SKILLS //

- Agile Methodology
- Data-driven environment
- Team work and dynamics
